

WICK CARE. For the best quality burn we provide high-quality lead-free wick. Alternative wicks will work as well, (Avoid wax-coated wicks). Cut a piece of wick 2cm in length and insert in the centre hole. Wick should be about ½ cm above the surface of the oil.

CLEANING. Pour the oil and candle out through a strainer to remove any debris. Dry wipe your candle piece. Clean the container with soapy water or run through the dishwasher.

TIPS

□ We suggest using any brand of Canola, Corn or Vegetable oil as fuel. They have low cost, no odour and wide availability (Avoid low-fat oils, Fat is the fuel). The candle uses 3-4ml of Oil an hour. 1 litre is good for 250hrs!

□ Try decorating the bottom of the container with rocks, glass beads, seashells or any non-reactive material.

Avoid woods and plastics.

□ The Candle burns on average 10 hours before needing a reset. Sometimes it can last much longer, if the flame becomes weak, nudge the container to add some life.

□ This candle is safer than traditional candles, if it tips over, it will simply extinguish.

□ Before lighting, mix in 2-3 drops of essential oils to the vegetable oil to make a scented candle.

THIS IS A CANDLE.

Fueled by vegetable oil.

It burns like any other candle. However, instead of wax or petroleum it uses household natural oils. This reusable candle is simple and will last with a little care and understanding, it will be the only candle you will ever own.

STEPS

1. Cut 2cm of wick and soak the piece in oil. Squeeze out excess oil.
2. Place the wick in the centre hole of the Cork and Kindle puck.
3. Pour oil at a minimum (enough vegetable oil for the puck to float) into a solid flame retardant container.
4. Place the Cork and Kindle puck into the pre-filled container, Ignite and enjoy for 10 hours!

ONLY USE VEGETABLE OIL.

- ☞ Do not use any flammable liquids or fuels.
- ☞ Avoid containers with thin walls and bevelled shapes.
- ☞ To extinguish, blow out or submerge the piece.
- ☞ Replace or invert wick for next use.
